Assignment: Build Your Personal Portfolio Website

What is a Portfolio Website?

A portfolio website is a personal website that shows who you are, what you can do, and the work you have done. It acts like your digital resume, but with more personality: you can include photos, projects, contact information, and links to your social media or GitHub. In this assignment, you'll start creating your own simple portfolio using only HTML and CSS (colors, fonts, and borders). As we learn more (like JavaScript later), you'll keep improving this same website by adding new features and interactivity.

Before you start working on the assignment you are required to do research on the fonts and color combination on portfolio website

Project Overview

Page	Purpose	Content to Include
Home Page (index.html)	Introduce yourself	Your name, a photo, a short bio/introduction, and a simple welcome message
About Page (about.html)	Describe who you are in detail	Your background, education, skills, hobbies, and personal goals
Projects Page (projects.html)	Showcase your work or projects	A list of your projects with title, short description, and image
Contact Page (contact.html)	Let people reach you	Contact form (simple layout for now), plus your email or

		social media links

Suggested Folder Structure

```
portfolio/
|
├── index.html
├── about.html
├── projects.html
├── contact.html
└── style.css
```

Layout and Design Guidelines

Each page should have a navigation bar with links to all pages, a header, and simple styling using CSS.

Example Navigation Bar:

```
<nav>
  <a href='index.html'>Home</a> |
  <a href='about.html'>About</a> |
  <a href='projects.html'>Projects</a> |
  <a href='contact.html'>Contact</a>
</nav>
```

Use of CSS:

- Colors: Background and text colors.
- Fonts: Different font families and sizes.
- Borders: To separate sections or highlight elements.

Content Guidelines

Each page should contain the following content:

1. **Home Page**

    A welcoming heading, short introduction, a photo, and a short quote or statement.

2. **About Page**

    A short biography, your education and key skills, and a list or table for hobbies or interests.

3. **Projects Page**

    At least 3 projects with a title, short description, and an image for each.

4. **Contact Page**

    A simple contact form layout (not yet functional) and links to your email or social media.

Style Suggestions

Choose 2 to 3 main colors (background, text, accent). Use consistent fonts and borders or shadows to make sections stand out. Keep the layout simple and readable.

What to Submit

Send a note on what has been covered everyday

At the end of the assignment submit:

- A zipped folder containing all HTML and CSS files.
- Screenshots of each page in the browser.
- A short paragraph describing the theme or idea behind your portfolio.

Next, we will then upload it on GitHub for sharing with your friends

8. Next Steps (After JavaScript)

After we learn JavaScript, you will improve your portfolio by making the navigation responsive, adding interactivity like form validation or sliders, and including animations or visual effects.
